

One African-ancestry donor per matched block

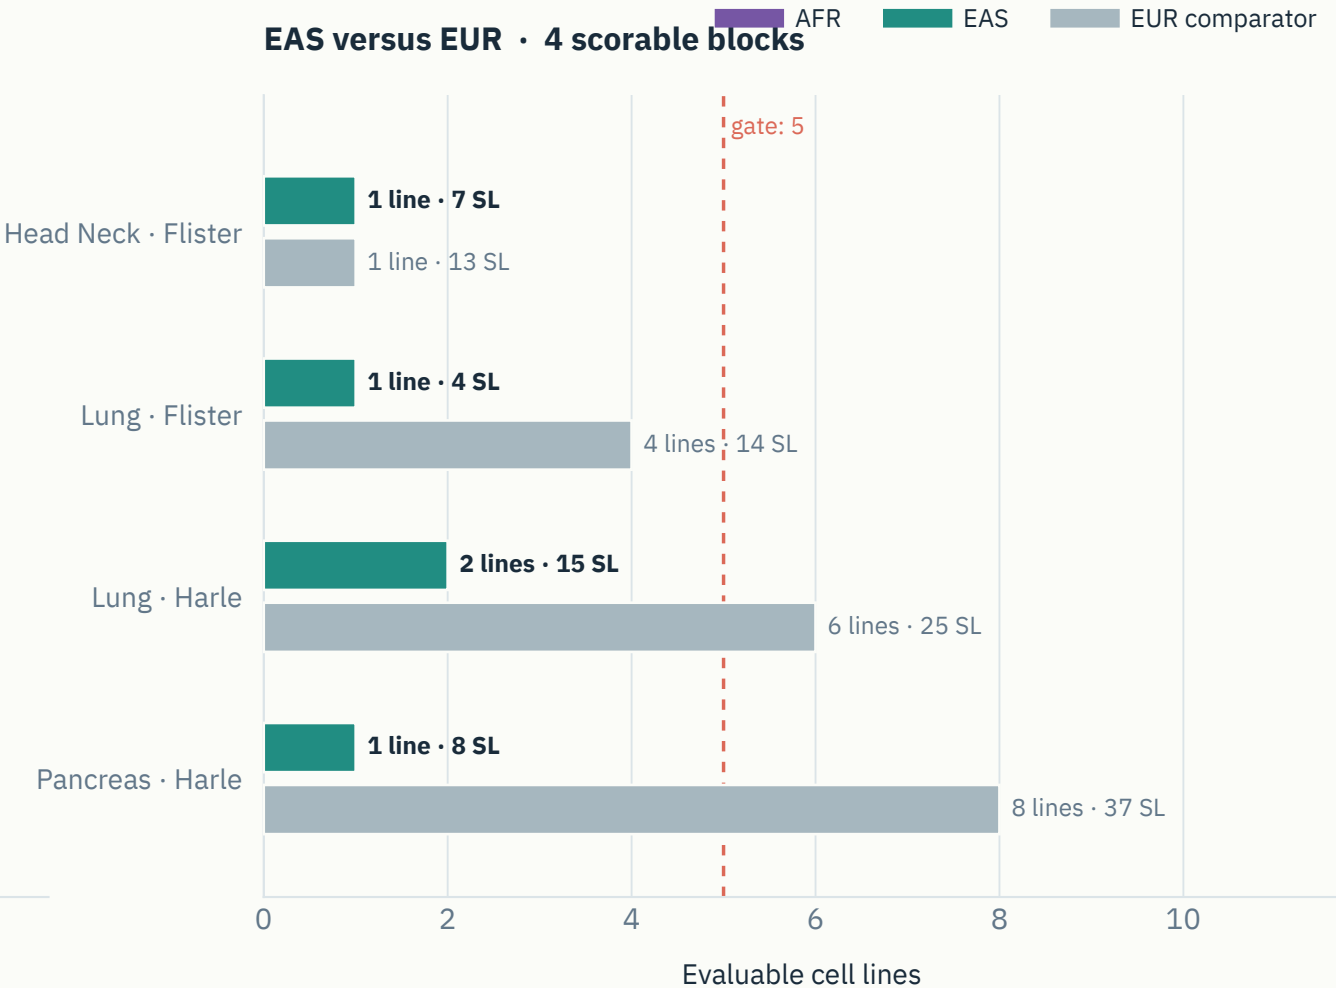

SLB-ANC-1.0 · Same cancer site, screen and gene pair · Gene-family-held-out test

Bars count evaluable cell lines. Dashed lines mark the five-line minimum; pair-count and SL-count gates are additional.

AFR versus EUR · 2 scorable blocks

EAS versus EUR · 4 scorable blocks

SL counts refer to retained matched test pairs. The two panels use different pair panels. Cell lines are donor proxies, not independent gene-pair rows.
